# SCANDINAVIAN DESIGN WITH SMOKED OAK

## Acoustic panels 2020

AcuWood acoustic panels are designed by the danish company Siga Design. The company has existed since year 1999 and has many years of experience within a wide range of custom made solutions. Siga Design has its own production facilities where also AcuWood is being made. The production is based on many years of danish craft traditions in both standard and custom dimensions.

AcuWood consists of slats that are placed on plywood. An acoustic cloth is attached on the back which creates the sound absorbing effect. The panels are measured to be able to silence the acoustic in a room by more than 50 percent which is remarkable.

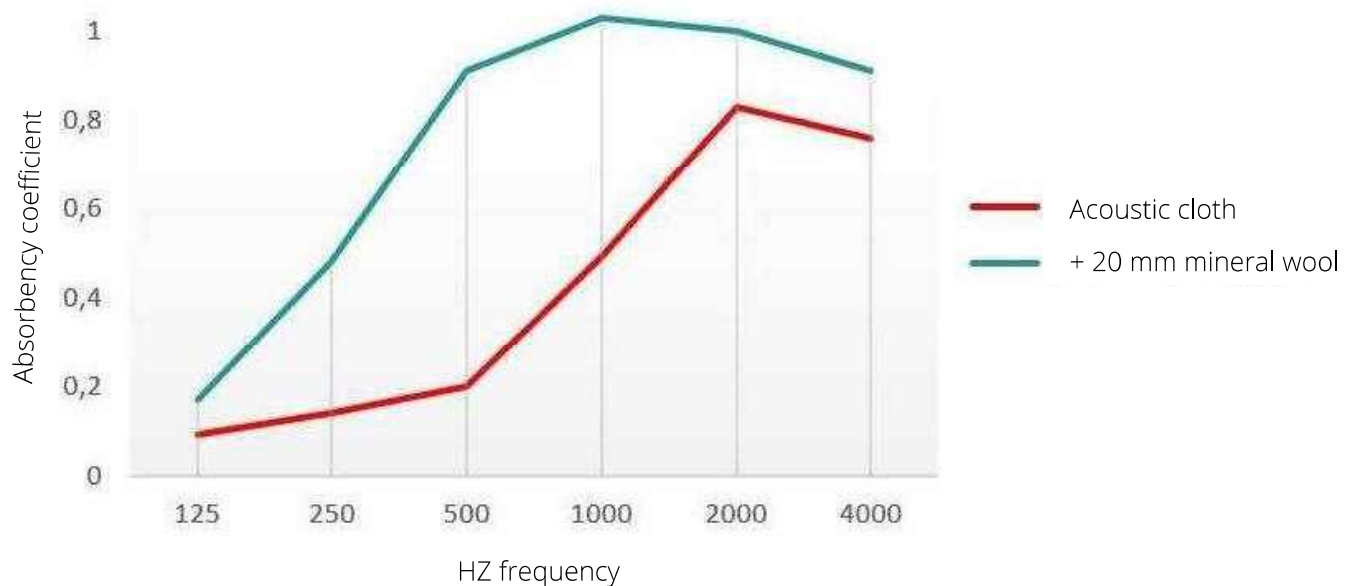

The acoustic panels can be used for both walls and ceilings. AcuWood has also been used on front disks, side boards and cabinets with big succes. The panels are especially advantageous in newer homes and buildings that are build in hard materials and with high ceilings.

**BETTER SOUND QUALITY  
WITH SMARTER DETAILS**

## Reverberation creates an unpleasant environment

In these times many buildings and homes are made by hard materials as concrete and steel. Glass is also used to create large window areas and good light surfaces. These materials degrade the acoustic environment as the sound waves move around without being stopped. This creates background noise as echo which is uncomfortable. Acoustic materials as AcuWood can be used as walls, ceilings or art pieces to stop and silence the sound waves.

## Measurement of AcuWood acoustic panels

AcuWood is measured to 1.00 by a frequency of 1000 Hz. This means the panels can silence the acoustic in a room by more than 50 percent. AcuWood is therefore one of the best sound absorbing solutions on the market!

## Fireproof solution

AcuWood acoustic panels can be made in fireproof materials so that the MDF-center, plywood and acoustic cloth vil be in fireclass B, S1, Do. The fireproof MDF-center can only be chosen in black.

## Cutouts

AcuWood can be customized with cutouts for lamps and electric sockets. The cutouts will be made in the same design as the panels.

## Custom edges

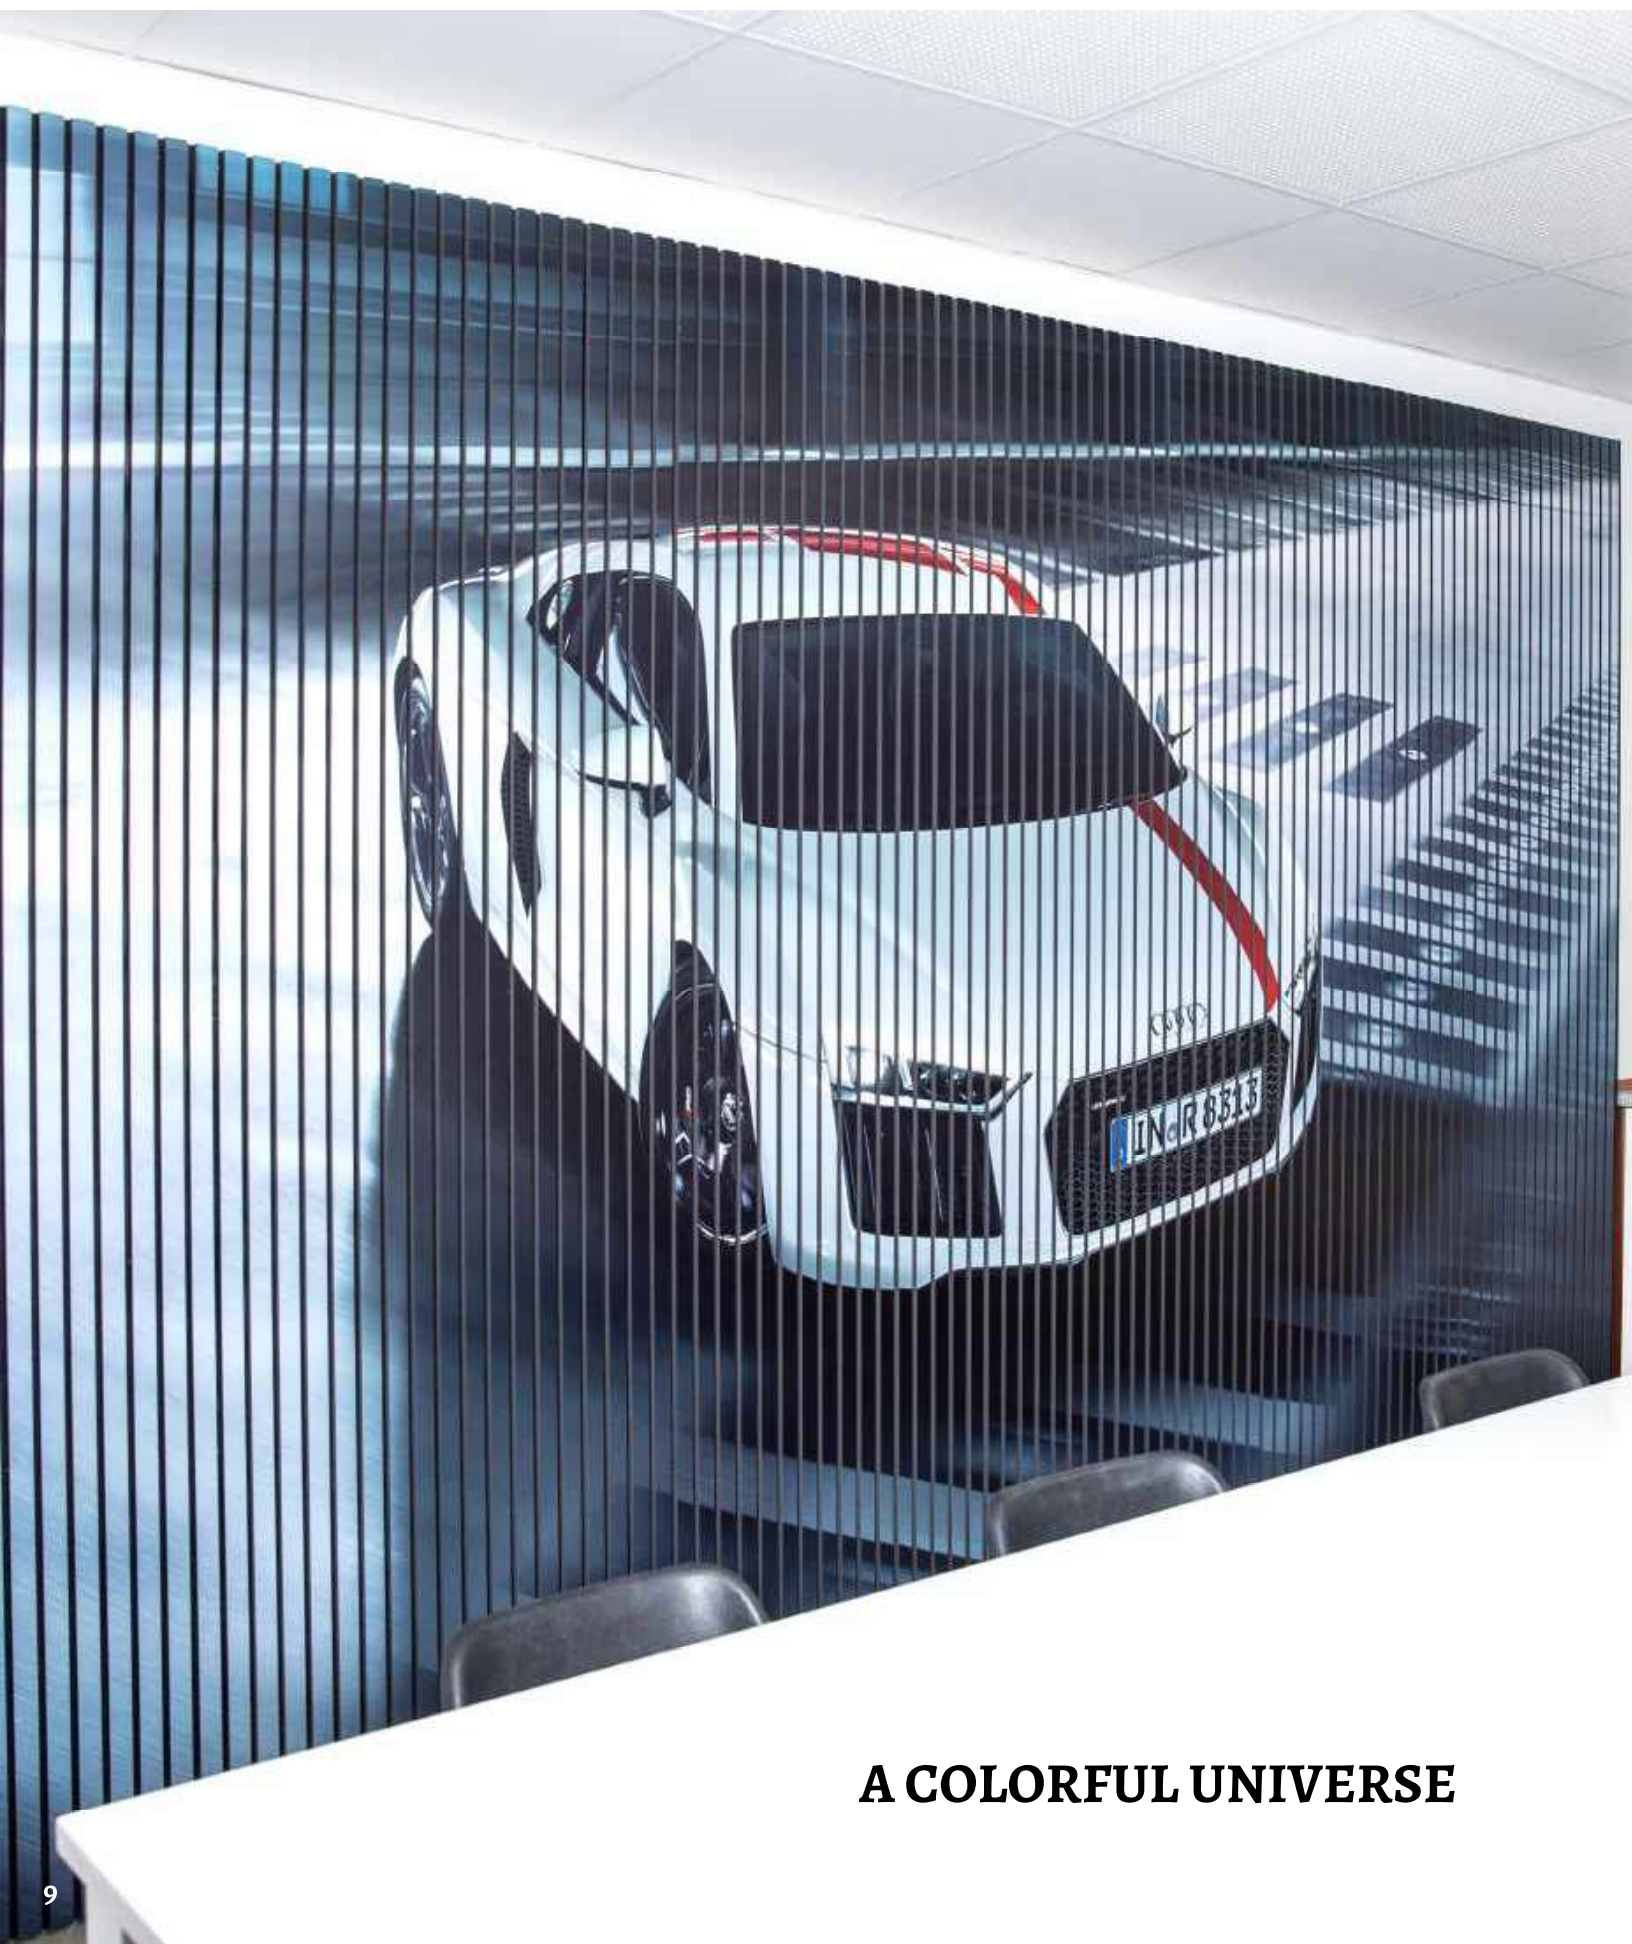

We offer customized edges for the AcuWood acoustic panels. The edges will be made in the same design as the chosen panels. The edges can also be made in colors as black and white if wanted. The edges creates a minimalist expression.

## Hangers

AcuWood can be bought with hangers for shelves, picture frames and more. The hangers can only be used if the panels have horizontal slats. The hangers are small and easy to hide. AcuWoods slats have a carrying capacity of 4 kg.

**A COLORFUL UNIVERSE**

## **Print and logoprint**

AcuWood can be manufactured with print of a self-selected image or logo. It does, however, require the image to have a high quality so it won't be blurred when enlarged. This will surely be checked by our production staff before production.

Print and logoprint are made in collaboration with Typographic A/S.

## **Painting**

AcuWood can be painted in all the colors of the rainbow so you can achieve a modern and significantly design. It is therefor possible to create some beautiful white acoustic ceilings, midnight blue walls in the kitchen or just some colorful panels for the childrens rooms. The panels can maintane the well known and safe enviroment in the home.
