Travis.

660 range

Witteveen
Project-Inrichting.nl

Model 664/10
Design: wiege

Spatial, customized solutions and perfect integration of technical equipment – Travis combines individual requirements with the aesthetic excellence of industrialized, series production.

Travis. The new dimension in conferencing.

Growing specialization and complexity require more and more cooperation and agreement. The frequency of meetings and conferences and the time they require is increasing accordingly. Conference equipment and furniture should be top priority when specifying conference interiors:

- To bring people together, strengthen their common interests and promote decision processes.
- To convey the values and approach of the company in a lasting manner.
- To open up the multimedia virtual world in view of globalization and worldwide networking.

As these tasks require highly individual solutions depending on the company, room dimensions and media technology, Wilkhahn has collaborated with the wiege design studio to develop the new Travis table range that combines significant advantages:

- Derived from the Italian word “trave” (beam), the name characterizes the advantage of table configurations permitting a span of up to three metres with just a few table legs. This creates a calm atmosphere, allows flexibility in terms of the number of seats and facilitates floor cleaning.
- The modular frame is an articulating structure comprising pedestal legs, beams and table top bearers, thus providing perfectly coordinated frame geometry for virtually any form and format: for a configuration that is solid or open-centred, circular, oval, barrel-shaped, boat-shaped or faceted.
- Specially developed, retractable cable channels, adapted to the specific length of the beams and linking angles, open up a host of possibilities for integrating state-of-the-art media technology into table configurations in a way that is easily accessible, functionally and aesthetically perfect.

In a nutshell: Travis accommodates individual requirements with lasting aesthetics, technical functionality and sustainable quality of the highest degree.

This boat-shaped, open-centred table configuration (model 664/10) is designed to provide fourteen to sixteen delegate places. The curved shape facilitates interaction among participants. The table with oak veneer, stained in the colour grey, chamfered table edges and six bright chromium-plated pedestal legs with slender T-shaped foot sections give the configuration a light and graceful appearance. The table configuration appears to have floating surfaces due to the minimal understructure.

The table portals, with veneered hinged covers, provide simple access to the individually specifiable connectivity modules that are retained within cable management channels immediately below the table surfaces. This provides ample space for surplus cable and network adapters so that the table surface may be kept free and tidy. If Wilkhahn 4C-Boxes are used, every participant can access a presentation via a digital projector at the press of a button.

Tidy and technically perfect: the table portal with integral connectivity modules and concealed cable management in the pedestal column. Technology under visual control.

In addition to a chamfered and a straight edge profile, a bullnose double edge profile is available as the table lipping option. And: as an alternative to the T-shaped base, there is also a disc base, optionally bright chromium-plated, brushed, coated in the colour silver with a satin finish or black. In line with Wilkhahn's high quality standards, it almost goes without saying that the beams and table top bearers may also be colour-coordinated.

Travis allows extremely wide scope not only in terms of table forms and formats, but also allows the surface finish of the table tops and frame finishes to be coordinated with a specific design or utilization concept. The white conference table configuration (model 662/40), with a span of 360 cm to accommodate ten to twelve participants, requires two pedestal legs only. It has a high-performance coating and a straight edge profile. In combination with the graceful and transparent swivel chairs from the Aline range, the result is an extremely loose and light ambience.

Travis.

Customization perfected by series production.

The Travis range offers a host of pre-specified model variations that provide a solution to many requirements. The modular frame structure also allows customized solutions – in the same excellent quality as the series models as its design is both simple and intelligent:

- Two pedestal supports are linked via a beam in extruded aluminium profile with a high-precision finish over a maximum length of three metres, using either an end closure or a pivoting mechanism which accepts the next beam at a specifiable angle (within a range of 90°–180°). This system allows the pedestal supports and beams to be linked to create limitless configurations.
- Positionable table top bearers in die-cast aluminium slide into the mounting grooves on both sides of the beams as required and are secured in the required position. A unique leveller device at the end of the bearer onto which the table tops are located not only gives the table top segments their “floating” character, but it also guarantees simple and precise positioning to give even complex configurations a coherent appearance.
- The retractable cable channels are finished to match the beams and the corner brackets to ensure a coherent design language in any configuration down to the very last detail. The additional cost of such perfection pays off quickly in terms of use: due to smooth functioning, fast and simple accessibility, exchangeability of connection modules as required and time-saving operation.

When the desired frame has been configured, the table top segments are simply positioned, secured and levelled via the table top bearers. The modular frame structure allows future adjustment as required.

Circular or angular, boat-shaped or barrel-shaped, as an open-centred or a solid configuration, with a disc base or a T-shaped base, with chamfered, straight or bullnose double edge profile, with elegant veneer or hardwearing coating – Travis is the ideal range for customized conference table configurations. We hope you will be inspired to create your own ideas. Your brief is our challenge – the Wilkhahn Customized Manufacturing Centre looks forward to tailoring a solution just for you.

An intelligent addition to open-centred configurations: modesty panels coordinated with table contours in terms of length or radius.

Perfect industrial design: the beams and the table top bearers allow optimal adjustment to meet individual preferences.

The linking angle may be liberally selected within a range of 90° to 180°.

Versatile details: three different types of edge profiles and a wide choice of surface finishes to merge with an existing design theme.

Depending on the table top format, the table form and the application, pedestal legs with a disc base or a T-shaped base are available.

Travis is striking as a free-standing table too. Generous legroom, table tops spanning up to 280 x 120 cm (fig. model 661/6) and elegant surface finishes are a sure mark of prestige in an executive's office.

Easily accessible, spacious and integrating perfect, optional equipment: cable channels in high-quality aluminium.

Put an end to cable clutter and makeshift arrangements: connectivity modules permitting variable configuration are integrated at a convenient and safe-to-use angle.

Optionally available: the specially developed 4C-Boxes with "show-me button" for spontaneous visual presentation of material from every workplace.

Larger pieces of technical equipment, such as retractable monitors, are mounted in a concealed manner into the techni-frames to ensure that table tops do not have to support the weight load.

Travis. Ready for the challenge.

Media technology has become an indispensable part of modern conference spaces. However, the way in which it is used invariably becomes a source of aggravation rather than of support: tedious cable installations and time and effort required for subsequent changes are a considerable cost factor. Cable clutter and network adapters on tables create a chaotic impression, inconvenient switching between sources of connectivity or even insufficient connections impair human interplay. From the very outset, Travis was therefore developed as a table system that allows perfect, user-friendly and coherent integration of modern technology.

The interior of the retractable cable management channels has special mounting grooves to accept modules for power, data, audio and network connections as required. The connectivity modules are fixed at an angle to permit easy access via the integral, hinged table portals. For more convenience and if required, modules may include dividers for separate channelling of power and data cables; and strain anchors ensure safe and interference-free connections. Besides, the cable management channels are so spacious that they can also accept network adapters or battery charging devices for mobile telephones in addition to surplus cable.

A joint project between Wilkhahn and its subsidiary company, foresee™, resulted in the development of connectivity modules with a "show-me button"; the modules are optionally available and connected in series. At the push of a button, a participant can access a presentation on the output device from his or her place via a notebook to make contents spontaneously available to all other participants. What is more: only one cable string is required per table configuration to supply up to 40 users with all connections necessary.

Variable positioning of the table top bearers in the beam ensure that integrated technical equipment and table portals are located precisely where they are needed. If media technology is to be integrated, for example a retractable computer display, a variably positionable techni-frame is inserted between beam sections to ensure that the weight load is supported by the table frame and not by the table top.

We will be delighted to meet you for a personal consultation to find a technical solution that is perfectly tailored to your specific needs and provides you with optimal benefits.

Functions. Materials. Models.

Function

Modular pedestal table system for configuring individually specified, static table configurations and free-standing tables for furnishing conference and executive interiors with a classic character in which wide spans of tables, customized table formats and forms and perfect integration of media technology are required.

Frame

T-shaped base in bright chromium-plated, die-cast aluminium or coated in the colour silver, satin finish, or black. Disc base in steel with a stainless steel covering, high-lustre polished, brushed or coated in the colour silver, satin finish, or black. Table column in steel tube, in bright chromium-plated or coated in the colour silver, satin finish, or black. Column optionally with duct for power supply (please specify when ordering). Beam with five mounting grooves in extruded aluminium profile, coated in the colour silver, satin finish, or black.

End closures and pivoting mechanism for attachment to table columns in die-cast aluminium in the same colour as the beam. Table top bearers in die-cast aluminium coated to match the beams in the colour silver, satin finish, or black,

for attaching the table top; the table top bearers are infinitely positionable within the beam and include steel devices for levelling out surface irregularities. Adjustable glides in black polypropylene, optionally with felt insert (for hard floors). The T-shaped base has colour-matched cover caps in stainless steel.

Base materials: table tops

Particle board for straight and double bullnose edge profile; MDF panel for chamfered edge profile.

Table top group 1 – laminate

Table top thickness 27 mm

Laminate according to Wilkhahn laminate samples.

Polypropylene edge profile in the same colour as the table surface.

Only straight edge profile possible.

Table top group 2 – veneer on top and underside

Table top thickness 27 mm

661 / 6, 120 x 280

661 / 61, 120 x 280

661 / 62, 120 x 280

662 / 30, diameter 240, 8–10* persons

662 / 40, 120 x 360, 10–12* persons

662 / 10, 180 x 340, 10–14* persons

662 / 20, 180 x 540, 14–18* persons

662 / 50, 220 x 360, 10–14* persons

662 / 60, 240 x 540, 14–18* persons

Variation 1

Beech, maple, oak or ash veneer according to Wilkhahn woodstain colour samples (exception: maple or ash with a natural finish is not available with a straight edge profile). Solid wood lipping as far as possible in the same colour as the veneer.

Variation 2

Cherry or walnut veneer according to Wilkhahn woodstain colour samples. Solid wood lipping as far as possible in the same colour as the veneer. Real wood veneer is processed by slip-match method onto the table top.

Modesty panels

In fluted aluminium that can be shaped to adapt to the contours of the table configuration; clear anodized or coated in the colour silver, satin finish, or black. Support brackets in steel, coated in the colour silver, satin finish, or black.

Cable channels

Fold-down, in extruded aluminium profile with guiding grooves, coated in the colour silver, satin finish, or black depending on the surface finish. Optional dividers and strain anchors in black plastic.

Techni-frames

Optional techni-frames in steel profile coated in the same colour as the beams and table top bearers, allowing variable positioning in depth, for insertion between ends of beams.

Subject to technical change without notice.

661 / 63, 120 x 280

661 / 8, 120 x 280

663 / 60, circular table configuration,
table top depth 90, diameter 1126,
36 persons

665 / 60, circular table configuration,
table top depth 120, diameter 1156,
36 persons

Example of U-shape: table top depth
90, 360 x 360, 12–15* persons

All dimensions in cm

* Number of persons in a high density seating arrangement (70 cm edge length per person)

664 / 30, table top depth 90, 398 x 1234, 30–32* persons
 666/30, table top depth 120, 456 x 1277, 30–32* persons

664 / 70, table top depth 90, 290 x 1253, 30–32* persons
 666/70, table top depth 120, 349 x 1308, 30–32* persons

664 / 10, table top depth 90, 227 x 537, 14–16* persons
 666/10, table top depth 120, 287 x 592, 14–16* persons

664 / 20, table top depth 90, 317 x 537, 16–18* persons
 666/20, table top depth 120, 377 x 592, 16–18* persons

664/40, table top depth 90, 468 x 1234, 32–34* persons
 666/40, table top depth 120, 546 x 1277, 32–34* persons

664/80, table top depth 90, 380 x 1253, 32–34* persons
 666/80, table top depth 120, 439 x 1308, 32–34* persons

664/50, table top depth 90, 204 x 540, 14–16* persons
 666/50, table top depth 120, 263 x 597, 14–16* persons

664/60, table top depth 90, 294 x 540, 16–18* persons
 666/60, table top depth 120, 353 x 597, 16–18* persons

Travis. Conference. Excellence. State-of-the-art.

Wilkhahn started to specialize in furnishing conference interiors with high-quality design and customized solutions many years ago. Table ranges such as Confair, Timetable, Logon or Palette have set new international standards for dynamic and variable table configurations that are still valid today. And Wilkhahn was the first company to integrate modern, interactive information and communication technologies into conference furniture, thus creating a new generation of solutions for conference settings. Competence in terms of concept formation, award-winning industrial design, high-quality customization and technological know-how mark the excellence of Wilkhahn conference furniture solutions throughout the world.

Global experience and the latest knowledge on the quality of applications, features and design have been incorporated into the development of Travis in order to offer "Conference. Excellence." within static meeting environments also.

The pre-specified models of free-standing tables and table configurations will give you an initial overview of the host of possibilities for coordinating Travis solutions with space format, the number of seats required and the utilization concept. In addition, there is extremely wide scope for re-dimensioning table sizes and forms, and for specifying table surface finishes and technical equipment to meet your personal requirements.
