

EFG HideTech & EFG HideTech AVM

Furniture for meetings

EFG HideTech range.

EFG HideTech is a range of desks designed for the future when an ever greater share of work will consist of meetings. Meetings where you stand or sit, at high tables or low tables, large or small.

Above all, EFG HideTech is a new way of thinking. It's a way to meet a future where technology isn't only an integral part of working, but also an integral part of the interior design. It's about technology you access from the desktop via the next generation cable management. It's about new table top designs that ensure everyone can see and be seen, in video conferences, for instance.

Screen, camera, microphone ...
EFG HideTech AVM has it all in the work surface.

Hidden qualities with visible benefits.

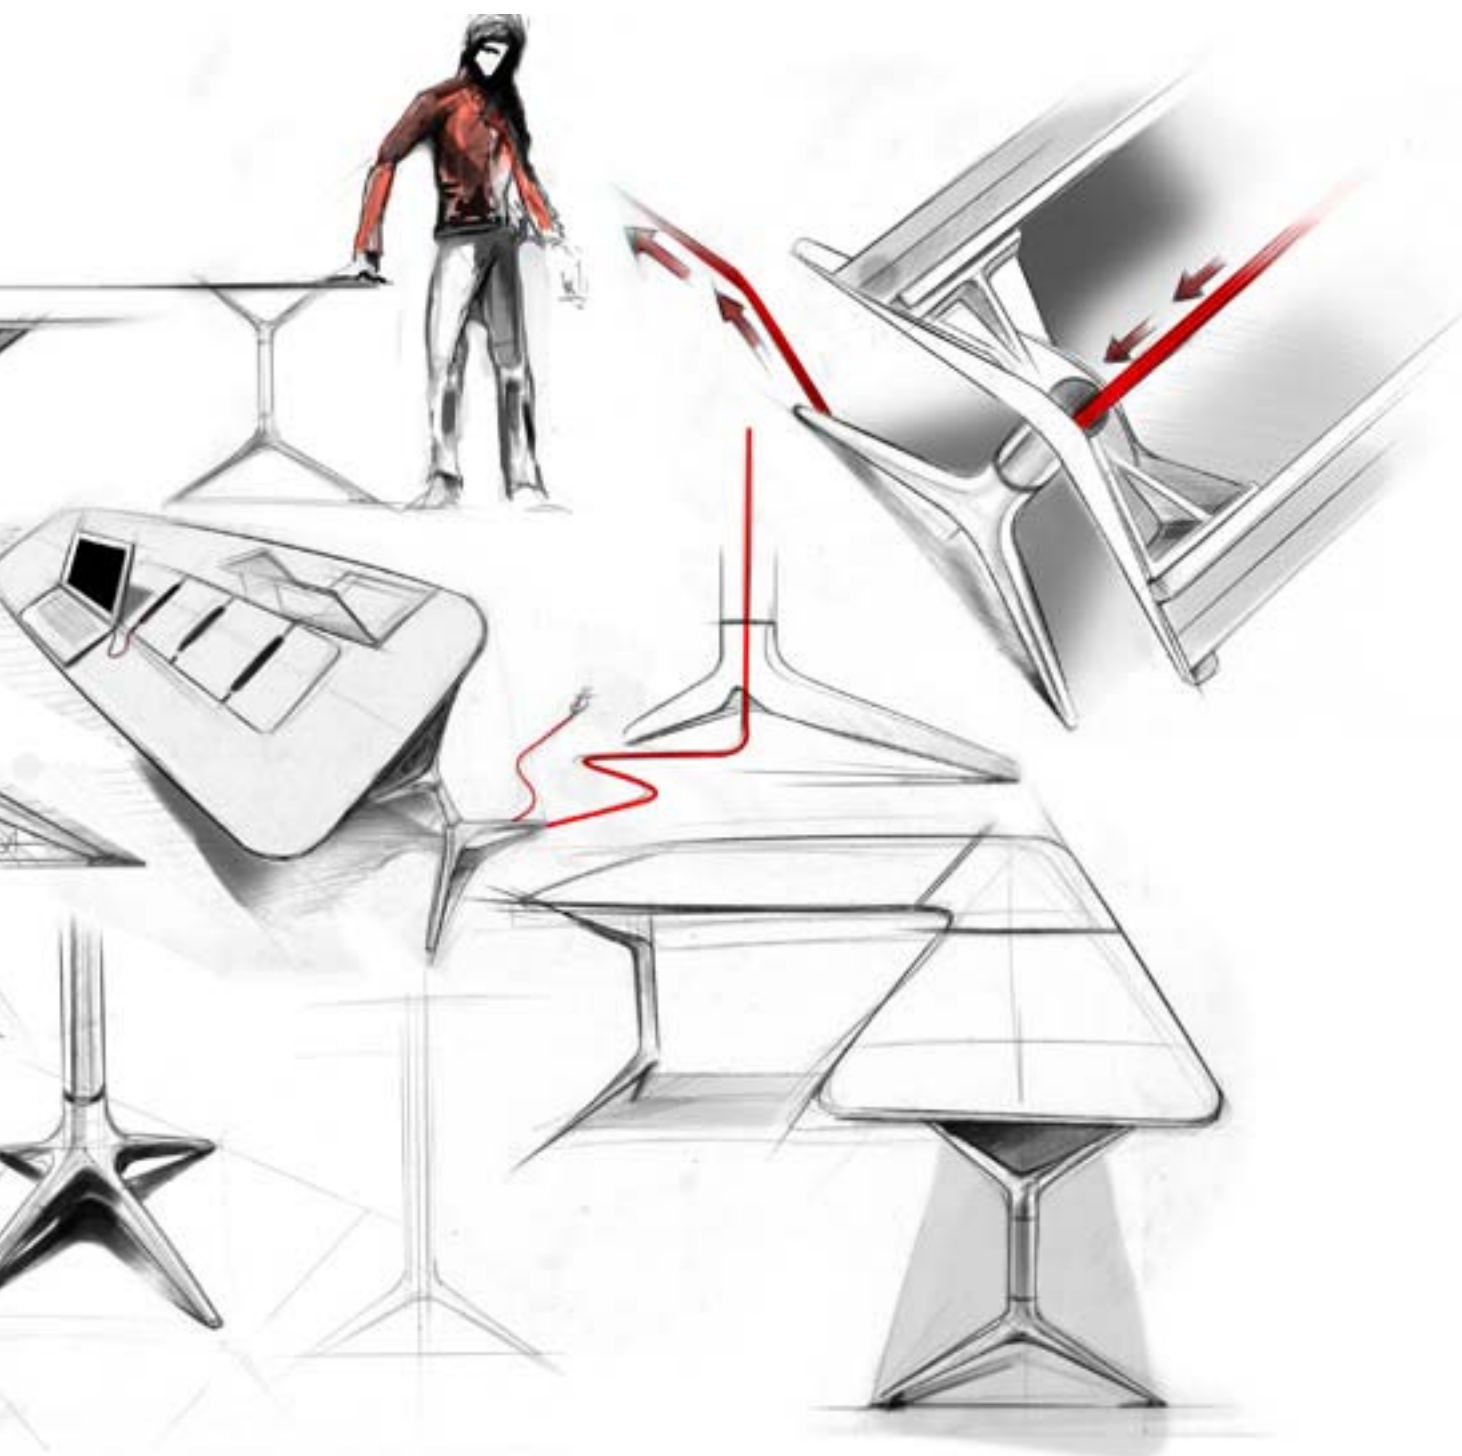

Cable management is integrated into the design of the EFG HideTech tables. There's a connection box located in the middle of the work surface with outlets for all kinds of power and data connections . . . you choose the outlets you want. And how many.

Cables from computers, for example, are concealed by covers that fit in place with the help of magnets. Cables to external sockets are led down desk legs to floor level.

EFG HideTech is designed by Idesign, a Swedish design agency specially commissioned to develop meeting tables for EFG. Idesign has vast experience of furniture for public areas, and has also designed a broad range of products ranging from outdoor leisure items and boats to trains, including the new design for Arlanda Express, Stockholm's airport express train.

The underside of the table and its cables are covered by a recycled polyester fibre sheet which prevents resonance from the table top and floor.

EFG HideTech AVM. All you need for internal and external communication.

The slim screen is protected by tempered glass screen. With the screen lowered, EFG HideTech AVM becomes a regular meeting table.

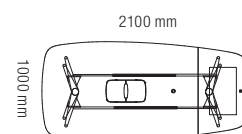

As in-house presentations and communication with the outside world become more important, EFG HideTech AVM (Audio Video Motion) offers the ultimate solution. Communication technology integrated into the table itself. Smart, practical and compact.

EFG HideTech AVM also features an outlet box with all its connection options.

Put EFG HideTech AVM in a traditional meeting room or out in the office landscape – you don't need a wall to hang a screen or display.

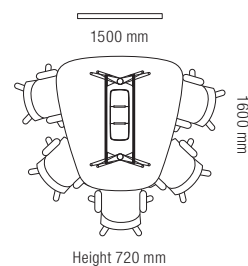

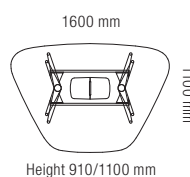

Behind the tempered glass there's a screen, two loudspeakers and an HD camera. The screen can be controlled from a laptop computer, for example. Or, even better, from a computer integrated in the table. The work surface in anti-glare, sound-absorbing linoleum features a height adjustable microphone.

Video conferences, great. But can everyone see?

EFG HideTech for fast-paced, dynamic meetings. Table height 910 and 1100 mm. Savo Invite High seating teams with the 910 mm table.

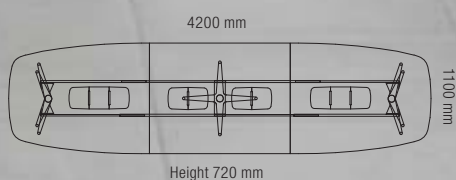

Out of ten new table shapes, two have been specially developed for presentations and interactive meetings. The basic design premise is that everyone should be able to see and be seen.

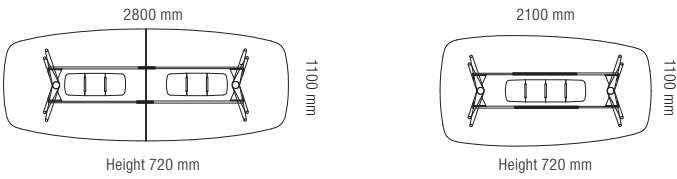

EFG HideTech is one of the most stable conference tables on the market. Even really long tables are just as stable, thanks to the four-footed pedestal base.

EFG HideTech table top in black stained oak with black lacquer frame. Graf chair.

EFG HideTech table top in natural birch with polished aluminium frame. Graf chair.

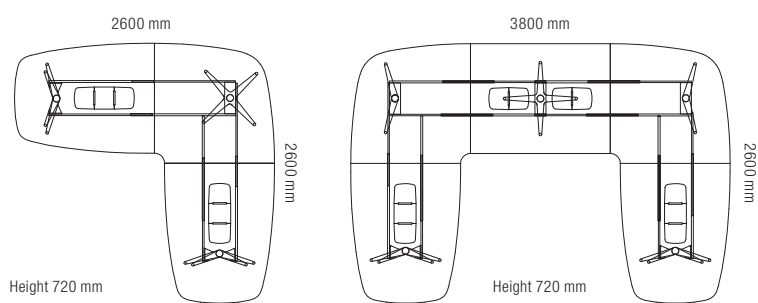

EFG HideTech table top in walnut with white lacquer frame. Savo S3 chair.

EFG HideTech is designed to suit all kinds of meetings. Large and small, with or without video conferencing. With access to power and data right in the table.

EFG HideTech in a gently curved, practical V-style configuration. Table top in white stained oak with polished aluminium frame. Woods conference seating.

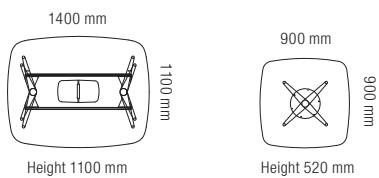

It's the smaller tables that make the range complete.

Outlets for power and data are available for the smaller tables in the range, too. You can also opt for a perfectly smooth table top with no outlets.

High and low, large and small, supple shapes and bevelled edges in common. The EFG HideTech range.

They say variety is the spice of life. With a table height of 1100 mm you can choose whether to sit or stand while working. EFG HideTech with black stained oak work surface and polished aluminium frame. Graf chair.

EFG HideTech 520 mm high for lounge and reception areas. Pictured here with a white stained oak top and white lacquer frame. Desmond sofa and armchair.

Here's an overview of the materials and colours available as standard for tops and frames.
Yes, as standard. We can also help out if you'd like something else.

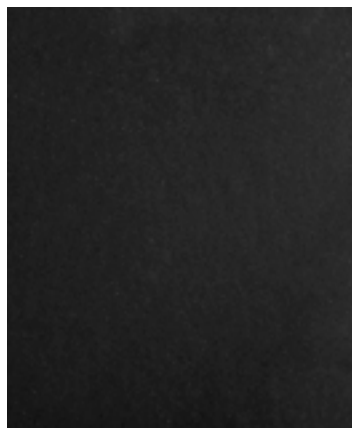

White Stained Oak

Linoleum Coffee

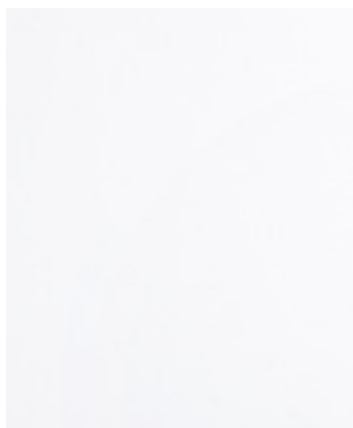

Natural Walnut

Linoleum Nero

Black Stained Oak

HPL White

Natural Birch

Veneer: Walnut, white or black stained oak and natural birch.
Linoleum: Coffee and Nero
High pressure laminate: White HPL
Frame available in four versions: Polished aluminium, white or black lacquer, polished aluminium with grey column.

You choose freely among materials and colours for tops and frames, and you choose which connections you want in the box.

We have developed ten new table shapes, all with gentle corners and bevelled edges, specially adapted for EFG HideTech. The standard width is 1100 mm to reflect the trend towards smaller meeting rooms. Tables are available with or without a connection box.
