Overview of systems

constructiv PILA Office

The PILA system family shares a connector which is differently sized according to the particular system. The main elements of the system are connectors and supports. They ensure versatility, easy handling and freedom of design. The PILA systems allow an open space structure deliberately stressing the technical character of the structure or a supporting structure for glass or textiles, where the system remains completely in the background.

constructiv PON Office

This architectural system is distinguished by light weight and high stability. Thanks to its high-tech, precision-made aluminium tubing it has an extremely high stability almost comparable to steel. Clever connectors not only permit tool-free assembly - thanks to the light materials of the system and their modularity, the system has a low loading volume and transport weight.

constructiv CLIC Office

The modular elements are joined together with a soft click, growing step by step from a simple display into a complete exhibition, shop, office or trade fair system. The simple, self-explanatory construction principle, the austere appearance as well as the graphic and architectonic versatility are convincing.

Office Bauformen

System cube as communication zone

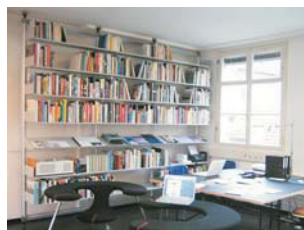

System cube as workplace

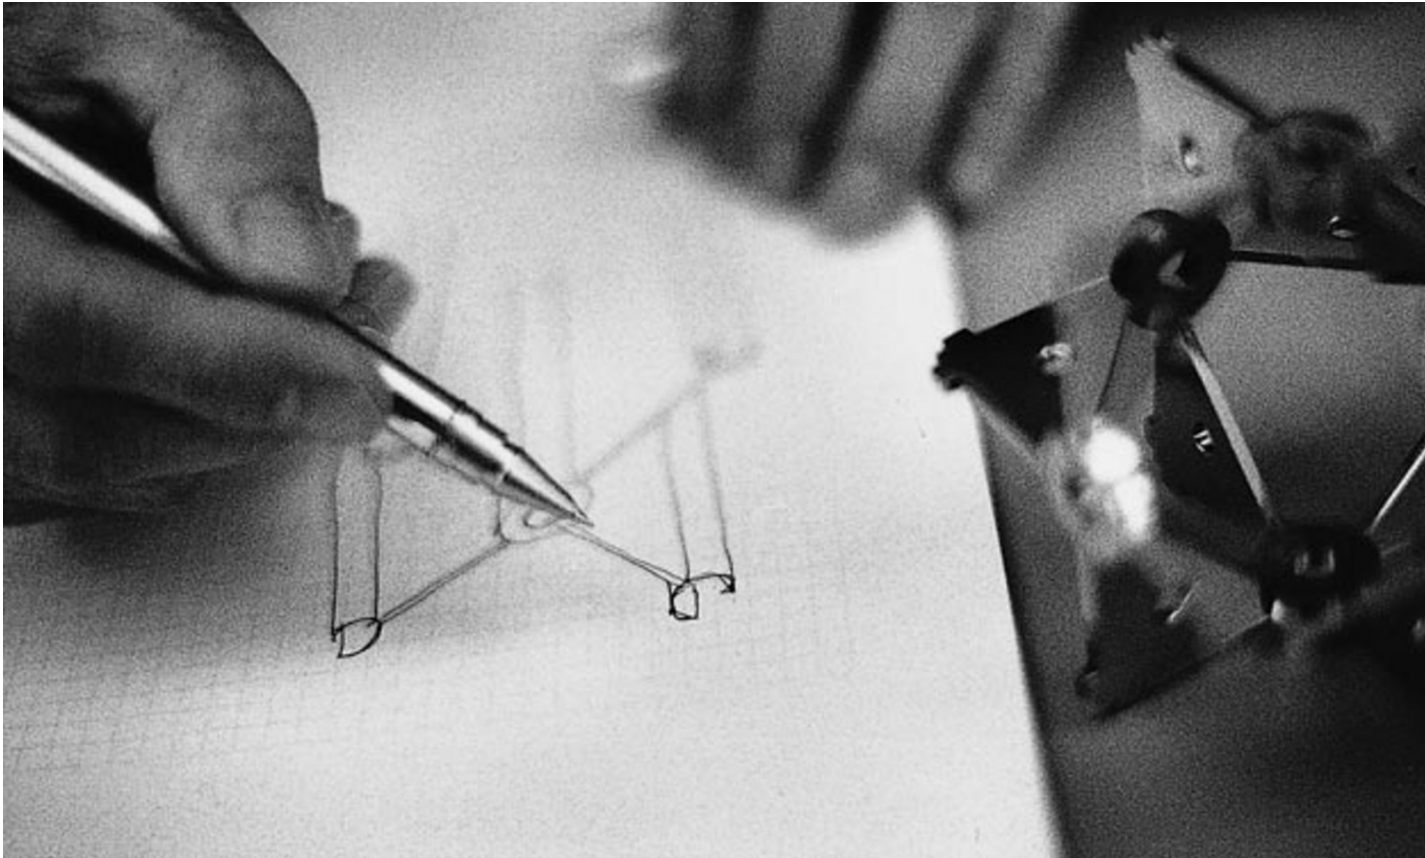

System cube in public spaces

Open office structure

Office furniture

Company

Even though we are thirty in number – planners, designers, engineers and sales people: the bureaucratic assignment of functions is unknown to us. Because each of us is responsible to the others and to the whole thing. Whether it's system development or architectural planning: all projects are handled in open teams of varying composition. And the team includes the client too. It is only in a dialogue with you that complex problems can be reduced to simple solutions. It is with this "constructive" cooperation that we have made a name for ourselves in the literal sense. That name is: Burkhardt Leitner constructiv.

Company History

1993 Formation of Burkhardt Leitner constructiv GmbH & Co. KG as think tank for the development of exhibition systems, three employees. Production, storage and distribution are taken over by external partners. **1994** constructiv JUNIOR, constructiv PRIMUS, constructiv JOKER, constructiv MAX, constructiv PANO, constructiv SIXO, constructiv PILA **1996** Relocation to larger offices “Am Bismarckturn”, ten employees. Integration of the distribution with international licence and sales partners. constructiv PILA Petite, constructiv PILA Doppelstock, constructiv INSIDE, constructiv WING **1997** constructiv CLIC, constructiv POSTO **1998** Strategic extension of business fields as regards office; development of acoustically effective modules. constructiv PILA Office **2000** Opening of our Berlin office. **2001** Relocation to larger offices in the city centre of Stuttgart, 30 employees. Concentration on this location: integration of our capital city office. constructiv CLIC Rund **2002** constructiv PILA mini **2003** Strategic extension of business fields as regards museum. constructiv CLIC Office **2005** constructiv PON, constructiv TELVIS I, constructiv TELVIS II **today** With meanwhile 35 employees and over 120 independent licence, sales and planning partners at home and abroad, we distribute our architectural systems worldwide; our main business fields are trade fair, display, office, museum and exhibition. Since 1994 several exclusive special developments.

BURKHARDT LEITNER constructiv - Showroom, Stuttgart

Year	2005
Project	BURKHARDT LEITNER constructiv - Showroom, Stuttgart
Design	BURKHARDT LEITNER constructiv, Stuttgart
Size	600 m ²
System	constructiv PILA Office constructiv CLIC Office constructiv PILA Petite

In a protected late Victorian building, we realised our concept for the flexible, modular and temporary office: a combination of zones for working, support, communication and interaction. Mobile meeting and office boxes get work moving - literally. Open spatial structures and individualized work cubes adapt flexibly to working rhythms. Various panels are used for active sound insulation, but also for graphic and typographic as well as colour design, to create a motivating work atmosphere. The office lives. As a place of living communication and social relations, it permanently flows and continually changes.

Denz - Office Project, Nänikon

Year	2005
Project	Denz - Office Project, Nänikon
Design	Messerli Kommunikation im Raum, Wetzikon
System	constructiv PILA Office

Denz organises the workplace according to the latest findings from the work environment with visionary, innovative and durable high-class products with a timeless design.

The professional planning creates spaces, which motivate, stimulate and inspire. Functionality, ergonomics and economy are incorporated into the planning. Ecology influences all activities. Denz is accredited according to the latest ISO standards, the resulting demands are to be filled with life by customers, partners, suppliers and employees.

We are glad that constructiv PILA Office meets the high requirements of Denz and is used in the most different construction variants in the office by Denz.

AMD - Office Project, Dresden

Year	2004
Project	AMD - Office Project, Dresden
Design	HWP Planungsgesellschaft, Stuttgart
Size	150 m ²
System	constructiv PILA Office

Conference Rooms for AMD Dresden

AMD, one of the world's largest chip producers, was looking for conference room solutions meeting different demands for its Dresden site. Together with HWP Planungsgesellschaft, Stuttgart, and the producer of clean rooms, M+W Zander, we developed four single cubes, made of the architectural system constructiv PILA Office and covering a total area of 150 m², in the atrium of the building.

To do justice to the demands of sound insulation (37 dB), speech comprehensibility (0,8 sec) and the optical separation with a maximum share of daylight, we worked with satined safety glass in the walls and ceilings – in combination with panels in sandwich style. The ventilation and aeration is regulated by the air-conditioning in connection with additional system fans. A sprinkler system, cameras, smoke detectors and speakers, dimmable light fields made of system light fields, projector holding devices and projection surfaces were integrated.

Office H.P. Kaysser Nellmersbach

Year	2001
Project	Office H.P. Kaysser
Design	Burkhardt Leitner constructiv + Diane Ziegler, Stuttgart
Size	120 m ²
System	constructiv PILA Office constructiv PILA Petite

A medium-sized metalworking company was looking for an office system to adequately express its innovative production methods and corporate philosophy.

Rather than choosing a conventional look, the company decided in favour of constructiv PILA Office and its dynamic designs.

An open space structure was planned, to be made up of a series of flexible spatial modules. These could be reduced, enlarged or added to, thereby encouraging work in open teams to everchanging composition, and also allowing them to keep pace with the future development of the company.
